

MEET CHHUGANI

Machine Learning Engineer | NLP, Computer Vision & ML

+91-7862806190 | Gujarat | meetchhugani81@gmail.com | Portfolio: meetchhugani.vercel.app | GitHub: github.com/MeetChhugani | LinkedIn: linkedin.com/in/meet-chhugani

PROFESSIONAL SUMMARY

Final-year Information Technology student focused on applied machine learning for NLP, computer vision, and document intelligence. Built end-to-end ML systems using Python, Scikit-learn, PyTorch, and XGBoost, including RAG pipelines and multimodal interview analysis. Experienced in FastAPI, Streamlit, AWS, MLflow, and vector databases for experiment tracking, deployment, and production-oriented ML workflows.

TECHNICAL SKILLS

- **PROGRAMMING:** Python, SQL
- **MACHINE LEARNING:** Scikit-learn, PyTorch, XGBoost, Predictive Modeling, Classification, Regression, Feature Engineering, Model Evaluation, Model Tuning
- **NLP / INFORMATION RETRIEVAL:** NLP, OCR, Information Extraction, RAG, Embeddings, Sentence Transformers, Semantic Retrieval, Semantic Search, Information Retrieval, Document Processing
- **COMPUTER VISION:** OpenCV, MediaPipe, Computer Vision, Image Processing
- **ML ENGINEERING:** MLflow, Experiment Tracking, Model Training, Model Inference, Model Evaluation, Model Deployment, ML Lifecycle
- **BACKEND / CLOUD:** FastAPI, REST APIs, AWS
- **DATABASES:** PostgreSQL, MySQL, ChromaDB
- **DATA / TOOLS:** Pandas, NumPy, Data Preprocessing, Data Analysis, Git, GitHub, Jupyter Notebook, Streamlit

EXPERIENCE

Data Analytics Intern

Jan 2026 – Feb 2026

iStudio

- Built Python data engineering pipelines and ETL processes to validate, clean, and structure raw transaction datasets, yielding a ~25% runtime-error reduction.
- Performed exploratory data analysis (EDA) and statistical modeling utilizing SQL, Pandas, and NumPy to identify patterns and resolve operational problems.
- Collaborated in cross-functional teams to document database processes and translate complex analytical insights into structured reports.

Python with Django Intern

Jun 2025 – Jul 2025

Brainybeam Info-Tech Pvt. Ltd.

- Developed modular Python backend components and database schemas, implementing Django REST Framework endpoints for web application workflows.
- Automated testing, systematic debugging, and backend query optimization, achieving a ~30% response-time improvement in data processing.
- Utilized Git version control across multi-person development environments and generated developer-facing technical documentation.

PROJECTS

Employee Risk Radar | ML Prediction & Experimentation

Python, Scikit-learn, XGBoost, PyTorch, MLflow, SHAP, Streamlit

[Live Demo: employee-risk-radar-xexmbf3kfedcvxdrdgbnnh.streamlit.app](#)

- Developed an employee attrition prediction pipeline evaluating 1,470 employee samples across 30 feature variables using Python, Scikit-learn, XGBoost, and PyTorch.
- Addressed severe class imbalance using SMOTE and classification-threshold optimization, achieving a **0.89 ROC-AUC** score.
- Used MLflow for experiment tracking, recording model parameters, evaluation metrics, and artifacts across training experiments.
- Applied SHAP-based local feature attribution across key predictor variables and deployed the interactive ML workflow on Streamlit.

QuizLab | RAG-Powered AI Learning & Information Retrieval

Python, Streamlit, RAG, ChromaDB, Sentence Transformers, Groq,

Platform

NLP, OCR

[GitHub: github.com/MeetChhugani](#) | [Live Demo: quizlab-ed8.streamlit.app](#)

- Built a RAG-powered document intelligence pipeline that converts uploaded PDFs into searchable vector knowledge using PyMuPDF text extraction, chunking, Sentence Transformer embeddings, and ChromaDB storage.
- Implemented semantic and metadata-aware retrieval to ground Groq LLM responses in document context, maintaining a 3-state adaptive difficulty state machine executing evaluation logic in under 50ms.
- Added document hashing, source references, persistent vector storage, and configurable retrieval parameters to improve retrieval consistency, reusability, and scalability.
- Developed an interactive Streamlit interface for AI-powered document analysis and personalized learning workflows.

AI-Powered Mock Interview Analyzer | Computer Vision & Career

Python, FastAPI, OpenCV, MediaPipe, NLP, Recommendation

Recommendation

Systems, AWS

[GitHub: github.com/MeetChhugani/ai-interview-analyzer](#)

- Engineered a multimodal interview analysis pipeline utilizing MediaPipe face mesh landmarks (468 points) and Web Audio API spectrogram analysis, processing real-time audio streams under 150ms latency.
- Developed scoring workflows analyzing posture stability, speech tempo (WPM), and technical keyword density to generate structured candidate performance feedback.
- Implemented a recommendation system that analyzes candidate profiles and recommends suitable companies based on relevant matching criteria.
- Built asynchronous FastAPI REST APIs for interview analysis and candidate profiling, with AWS-based deployment/infrastructure.

EDUCATION

Gyanmanjari Innovative University, Bhavnagar, Gujarat

Expected Graduation: 2027

Bachelor of Technology in Information Technology

CERTIFICATIONS

- Machine Learning Specialization – DeepLearning.AI & Stanford | • IBM Data Science Professional Certificate
- Google Advanced Data Analytics Professional Certificate | • Python for Data Science, AI & Development – IBM
- Deloitte Data Analytics Virtual Experience | • Green Skills & AI Foundation Program
