

MEET CHHUGANI

Aspiring AI Engineer | Generative AI & LLM Application Development

+91-7862806190 | Gujarat | meetchhugani81@gmail.com | Portfolio: meetchhugani.vercel.app | GitHub: github.com/MeetChhugani | LinkedIn: linkedin.com/in/meet-chhugani

PROFESSIONAL SUMMARY

B.Tech Information Technology student focused on AI/ML and Generative AI application development using Python. Hands-on experience building RAG pipelines, LLM-powered applications, embeddings-based semantic retrieval, and vector database systems, alongside predictive ML, NLP, and computer vision applications — with practical exposure to rapid AI POC development, experimentation, and applied R&D using PyTorch, Scikit-learn, FastAPI, ChromaDB, Hugging Face APIs, and Streamlit.

TECHNICAL SKILLS

Programming	Python, SQL
Generative AI / LLM	Generative AI, LLMs, RAG, Embeddings, Sentence Transformers, Semantic Search, Information Retrieval, Hugging Face API, NLP, OCR, Information Extraction, Document Processing
Vector Databases	ChromaDB, PostgreSQL, MySQL
Machine Learning	Scikit-learn, PyTorch, XGBoost, Predictive Modeling, Classification, Regression, Feature Engineering, Model Evaluation, Model Tuning
ML Engineering	MLflow, Experiment Tracking, Model Training, Model Inference, Model Evaluation, Model Deployment, ML Lifecycle
Backend / APIs	FastAPI, REST APIs, AWS
Computer Vision	OpenCV, MediaPipe, Computer Vision, Image Processing
Data / Tools	Pandas, NumPy, Data Preprocessing, Data Analysis, Streamlit, Git, GitHub, Jupyter Notebook

EXPERIENCE

Data Analytics Intern — iStudio Jan 2026 - Feb 2026

- Built Python data engineering pipelines and ETL processes to validate, clean, and structure raw transaction datasets, yielding a ~25% runtime-error reduction.
- Performed exploratory data analysis (EDA) and statistical modeling utilizing SQL, Pandas, and NumPy to identify patterns and resolve operational problems.
- Collaborated in cross-functional teams to document database processes and translate complex analytical insights into structured reports.

Python with Django Intern — Brainybeam Info-Tech Pvt. Ltd. Jun 2025 - Jul 2025

- Developed modular Python backend components and database schemas, implementing Django REST Framework endpoints for web application workflows.
- Automated testing, systematic debugging, and backend query optimization, achieving a ~30% response-time improvement in data processing.
- Utilized Git version control across multi-person development environments and generated developer-facing technical documentation.

PROJECTS

QuizLab | RAG-Powered AI Learning & Information Retrieval Platform

Python, Streamlit, RAG, ChromaDB, Sentence Transformers, Hugging Face API, NLP, OCR | GitHub: github.com/MeetChhugani | Live Demo: quizlab-ed8.streamlit.app

- Built a RAG-powered document intelligence pipeline that converts uploaded PDFs into searchable vector knowledge using PyMuPDF text extraction, chunking, Sentence Transformer embeddings, and ChromaDB storage.
- Implemented semantic and metadata-aware retrieval to ground Hugging Face API LLM responses in document context, maintaining a 3-state adaptive difficulty state machine executing evaluation logic in under 50ms.
- Added document hashing, source references, persistent vector storage, and configurable retrieval parameters to improve retrieval consistency, reusability, and scalability.

Employee Risk Radar | ML Prediction & Experimentation

Python, Scikit-learn, XGBoost, PyTorch, MLflow, SHAP, Hugging Face API, Streamlit | Live Demo: employee-risk-radar-xexmbf3kfedcvxdrdgbnnh.streamlit.app

- Developed an employee attrition prediction pipeline evaluating 1,470 employee samples across 30 feature variables using Python, Scikit-learn, XGBoost, and PyTorch.
- Addressed severe class imbalance using SMOTE and classification-threshold optimization, achieving a 0.89 ROC-AUC score.
- Used MLflow for experiment tracking, recording model parameters, evaluation metrics, and artifacts across training experiments; integrated Hugging Face API for automated AI retention advisories with SHAP-based feature attribution.

AI-Powered Mock Interview Analyzer | Computer Vision & Career Recommendation

Python, FastAPI, OpenCV, MediaPipe, NLP, Recommendation Systems, AWS | GitHub: github.com/MeetChhugani/ai-interview-analyzer

- Engineered a multimodal interview analysis pipeline utilizing MediaPipe face mesh landmarks (468 points) and Web Audio API spectrogram analysis, processing real-time audio streams under 150ms latency.
- Developed scoring workflows analyzing posture stability, speech tempo (WPM), and technical keyword density to generate structured candidate performance feedback and a company recommendation system.
- Built asynchronous FastAPI REST APIs for interview analysis and candidate profiling, with AWS-based deployment/infrastructure.

EDUCATION

Bachelor of Technology in Information Technology — Gyanmanjari Innovative University, Bhavnagar, Gujarat Expected 2027

CERTIFICATIONS

- Machine Learning Specialization – DeepLearning.AI & Stanford
- IBM Data Science Professional Certificate
- Google Advanced Data Analytics Professional Certificate
- Python for Data Science, AI & Development – IBM
- Deloitte Data Analytics Virtual Experience
- Green Skills & AI Foundation Program
